VALUE PROPOSITION

As a	Persona
I want	register my informations on smart contract
Then	I access PoP Docs and register my informations

ACCEPTANCE CRITERIA

- I cannot save without selecting the document type
- I cannot save without filling in the value field
- Each value entered generates a hash for validation
- I can add as many documents as needed
- Each document added generates a hash for validation
- Each information added generates a blockchain transaction and is added to Persona smart contractt contract

SCREEN DRAFTS

The screenshot shows the 'Add Information' form in the popdocs application. The form is titled 'Add Information' and is located within a dashboard. The dashboard has a dark blue header with the 'popdocs' logo and navigation links: 'Dashboard', 'Add Information', 'Request validation', 'Certificates', and 'Configuration'. The form itself is white and contains the following fields:

- 'Select document type to add': A dropdown menu with 'Proof of name' selected.
- 'Value': A text input field with 'Person' entered.
- 'Value Hash': A text input field containing a long hexadecimal hash.
- 'Document Hashes': A text input field containing a long hexadecimal hash.

At the bottom of the form, there are two buttons: a blue 'Add document' button and a green 'Record' button.

End use case
Postcondition 1:	User record informations to be validated on your smart contract
Messages:	success message (1) - Success! <transction-hash> completed on the block <block-number>

SCENARIOS

@add-info

Feature: add information

In order to have a Persona smart contract at PoP Docs

As an Persona user, I want to register my informations

Background: add information page

Given I click 'add information' menu item

And I visit page 'add-informatin'

Scenario: add information with no selectes document type

Given I fill value field with <any-value>

And I see my <value-hash>

And I do not select <document-type>

When I try click record button

Then record button is 'desabled'

And I can not click the button

Scenario: add information with no value

Given I select a <document-type>

And value field is <empty>

When I try click record button

Then record button is 'desabled'

And I can not click the button

Scenario: add information with no document insert

Given I select a <document-type>

And I fill value field with <any-value>

And I see my <value-hash>

And I do not insert a <document>

When I try click record button

Then my information is saved

And I a success message <hash-transaction> displayed

Scenario: add information with document inserted

Given I select a <document-type>

And I fill value field with <any-value>

And I see my <value-hash>

And I insert a <document>

And I see my <document-hash>

When I try click record button

Then my information is saved

And I a success message <hash-transaction> displayed

Scenario: leave the page without recording the information

Given I select a <document-type>

And I fill value field with <any-value>

And I choose a <document> to insert

When I click some <menu-item>

And I visit 'another page'

Then my filled information is not saved
